## Rutherford Ultra-Lite Jig Shoes Size Guide

### Product Sizing

There are two methods for estimated your correct shoe size. For Regular width Rutherford Jig Shoes, you can simply measure your foot:

1. Start by standing on a piece of paper with your full weight and socks on. Using your longest foot, draw a line at the back of the heel and another line across the top of the longest toe. Measure the distance in between in inches.
2. Refer to the chart below to find the size that matches your length. This chart is the inside measurements of the jig shoe. Add whatever extra length you need for the fit you want. Then order the size of the shoe according to the fit you want.
3. This chart does NOT apply to any of the reel pumps.
4. Caution: The sizing estimates below are geared towards a very tight fit to the foot. Please adjust based on your preferences.

Snug fit is best as they will stretch.
